

FinTech Company Case

Report and Recorded Presentation Brief

Team	Up to three students. The report and video must be coherent team products.
Written report	10% of the course grade; no more than 10 pages in total, including figures, tables, references, and any appendix.
Recorded video	20% of the course grade; no more than 10 minutes. Every member must be identifiable and present substantive analysis for at least two minutes.
Video file	Submit one MP4 file no larger than 80 MB. Use readable slides and clear audio; verify that the complete file plays correctly before uploading.
Due date	Both components are due in Week 12. File-format and upload instructions will be posted on Canvas.
Delivery	Every team submits a recorded video. There is no in-person case presentation this semester.

Question to answer: Does this company solve a real financial problem, and can its business model scale without taking unacceptable risks?

Report framework

- Company and scope.** Identify the company, product, jurisdiction, period studied, and case question.
- Financial problem and users.** Explain the customer pain point, target users, and limitations of existing solutions.
- Product and technology.** Show how the service works and the actual role of data, AI, blockchain, payment rails, or other technology.
- Business model and economics.** Identify who pays, the revenue model, major costs, partners, incentives, and conditions for scale or profitability.
- Evidence and competition.** Use dated evidence on adoption, transactions, customers, revenue, pricing, performance, or market share, with a relevant comparison.
- Risks, regulation, and judgment.** Analyze the most material risks and end with the team’s assessment and indicators to watch.

Evidence and assessment standards

- Cite every non-obvious factual claim and every borrowed chart or image. Make clear what the company says, what an independent source reports, and what your team concludes.
- Prefer dated primary or authoritative sources. Label units, dates, jurisdictions, and definitions on exhibits.
- The report is assessed on problem definition, mechanism, business-model economics, evidence, risk and regulatory analysis, judgment, and organization. The presentation is assessed on selection and synthesis, evidence and visuals, organization, clarity, delivery, and meaningful participation by every member.
- Disclose any material use of generative AI. Your team is still responsible for every claim, source, calculation, visual, and conclusion.

Recorded presentation framework

- Do not read the report aloud. Use a small number of readable slides and make one clear argument. You may choose your own order and divide the time as you wish, but the presentation should cover:
1. the company, case question, and main conclusion;
 2. the problem, users, product, and relevant technology;
 3. the business model and how value is created and captured;
 4. the strongest evidence and a relevant competitor or benchmark; and
 5. the most important risks, regulation, and final judgment.

Individual contribution

- Each member must own a substantive analytical section and speak for at least two minutes.
- State each speaker’s name on screen or at the start of the segment.
- The sections should add up to one team argument, not three separate summaries.
